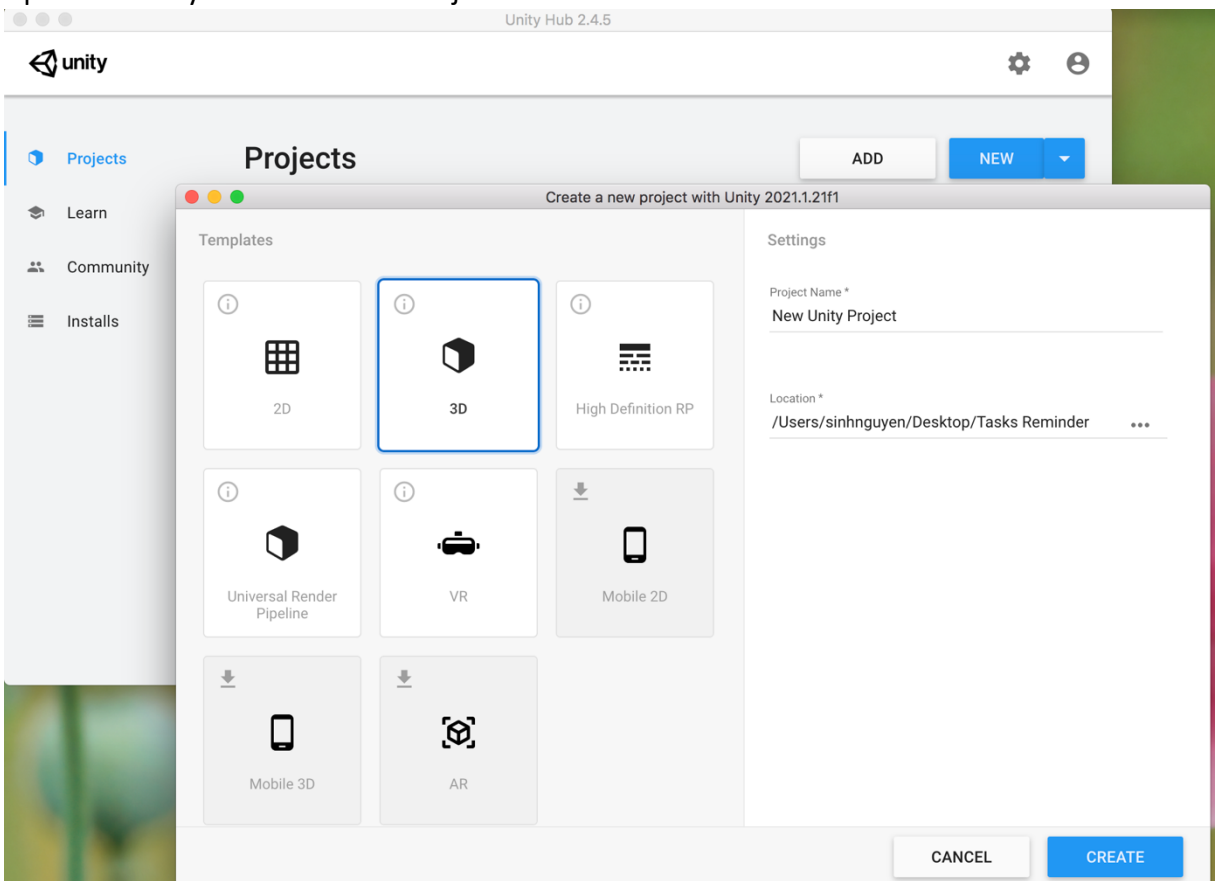
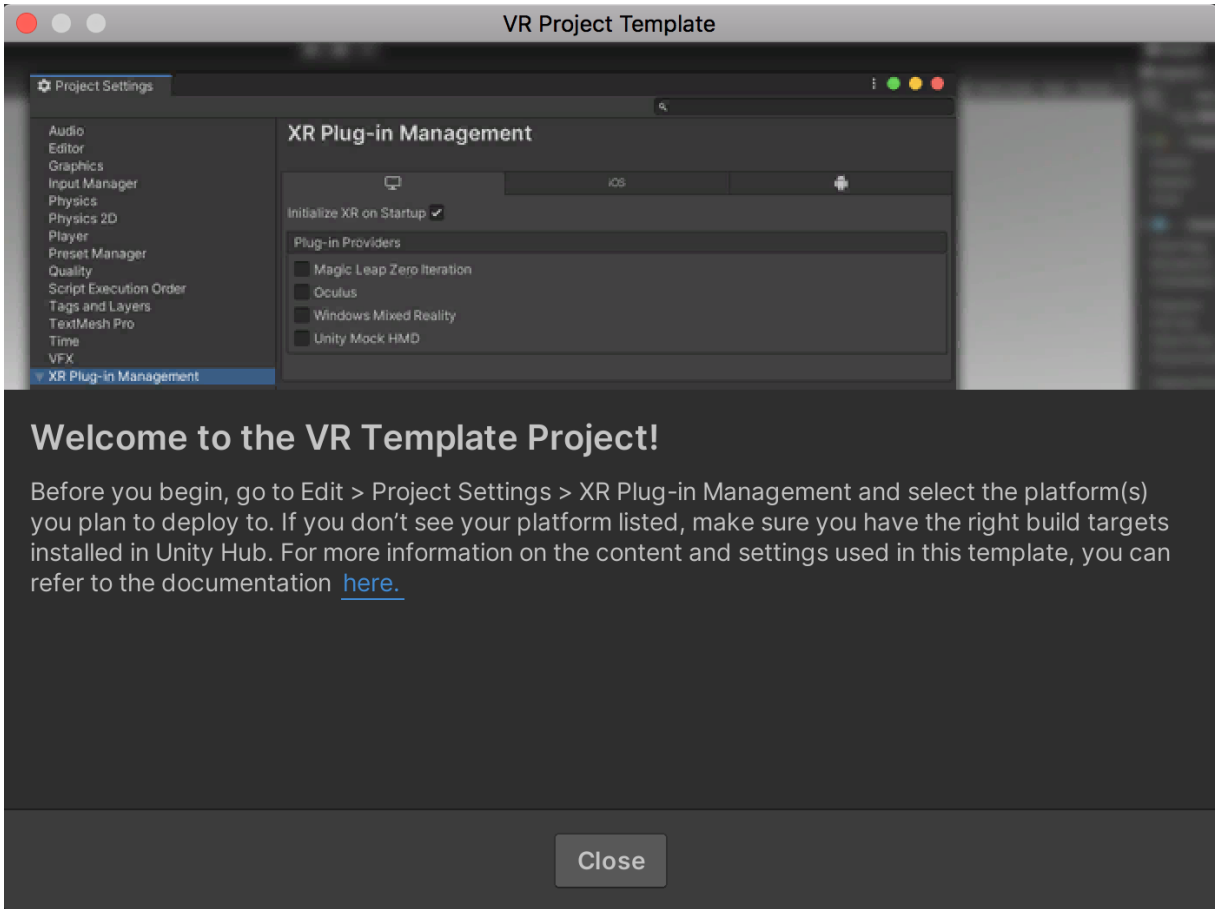
A guide-line to create a VR application by using Oculus Quest on the MacOS
Prepared by Dr. Sinh Nguyen, SCSE - HCMIU

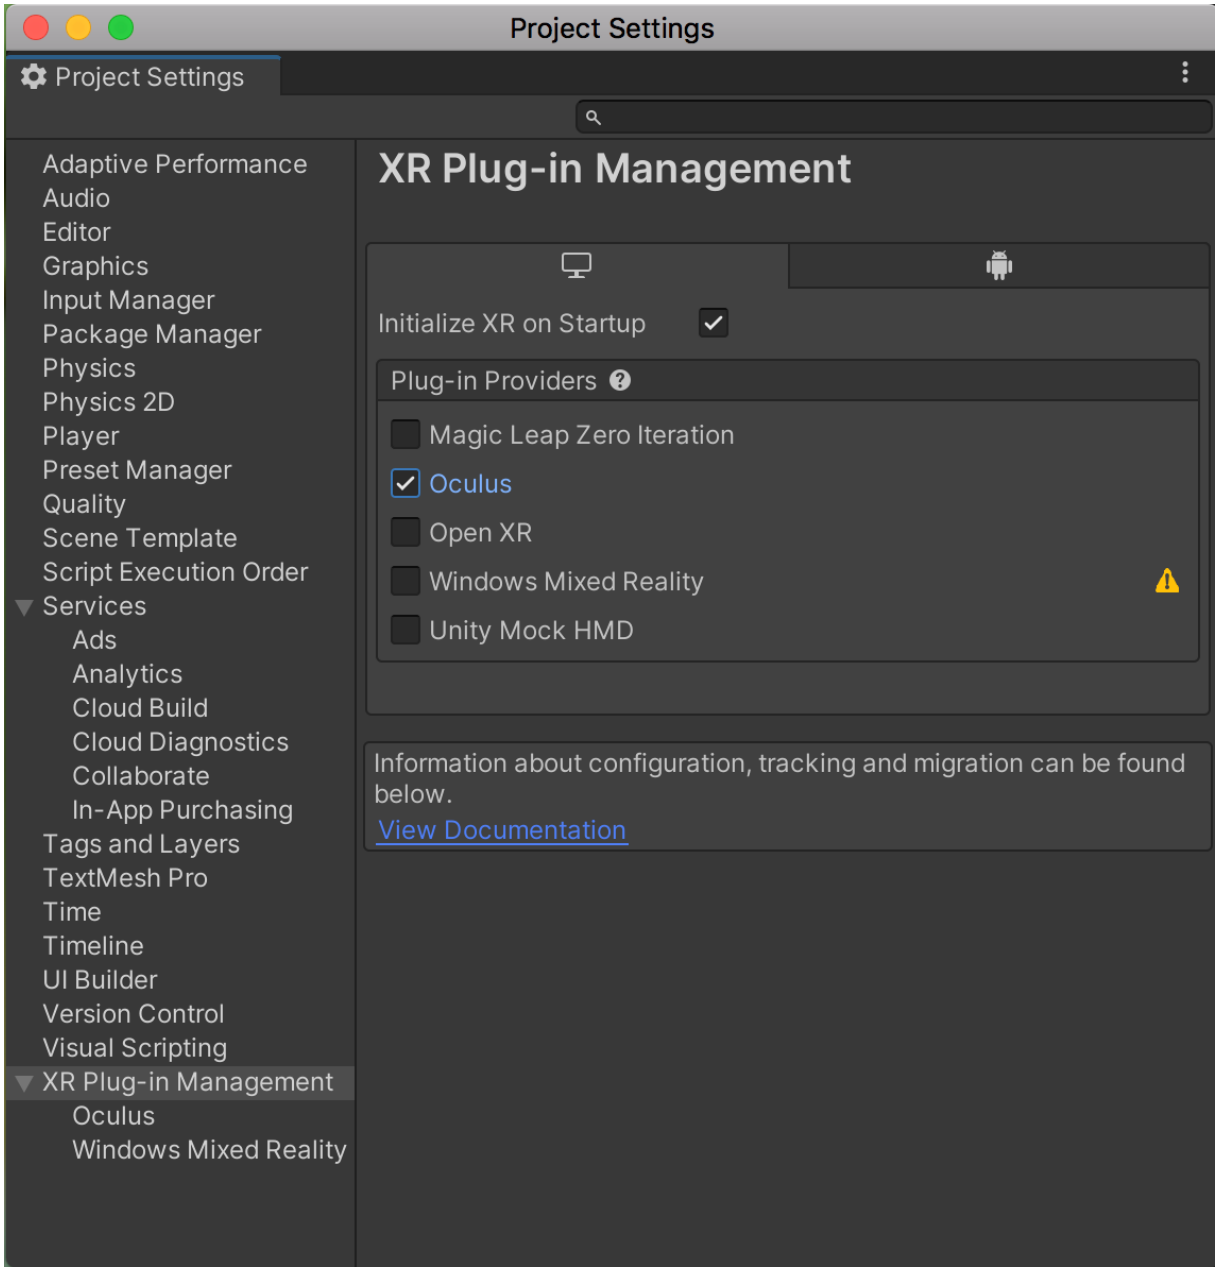
Open the Unity -> choose New Project -> chose VR



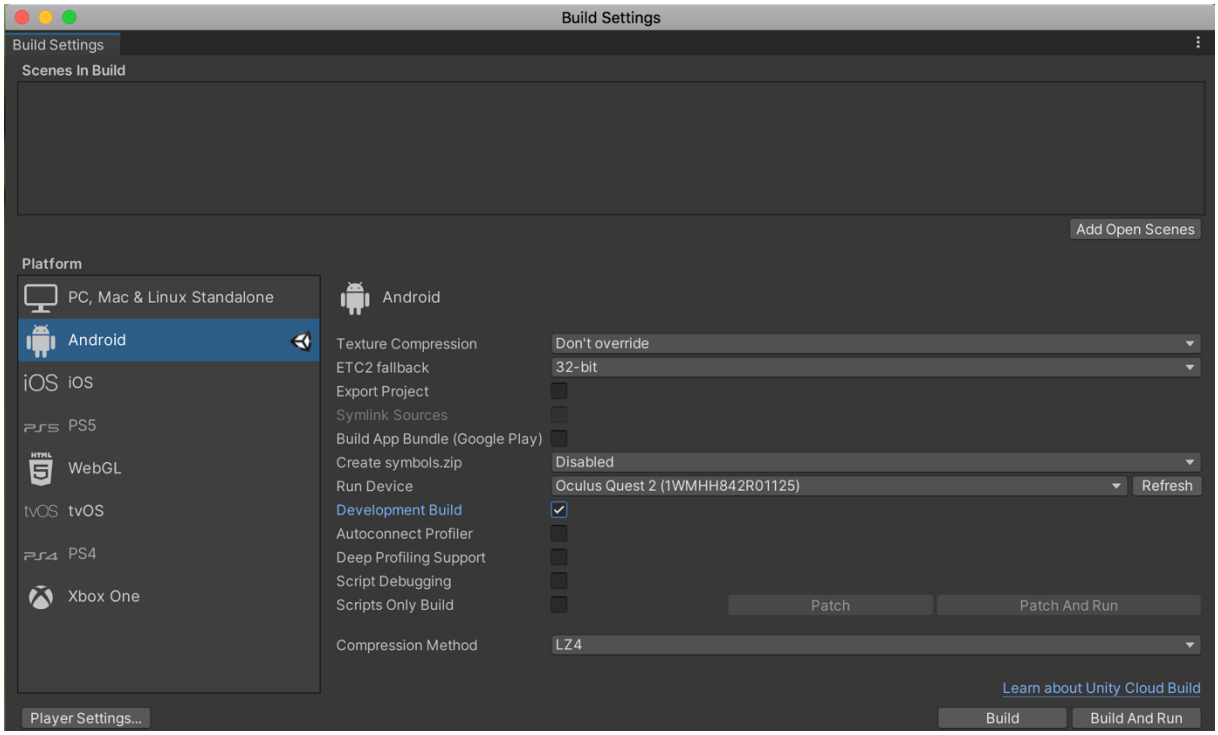
Click on “Create” button go to the next picture



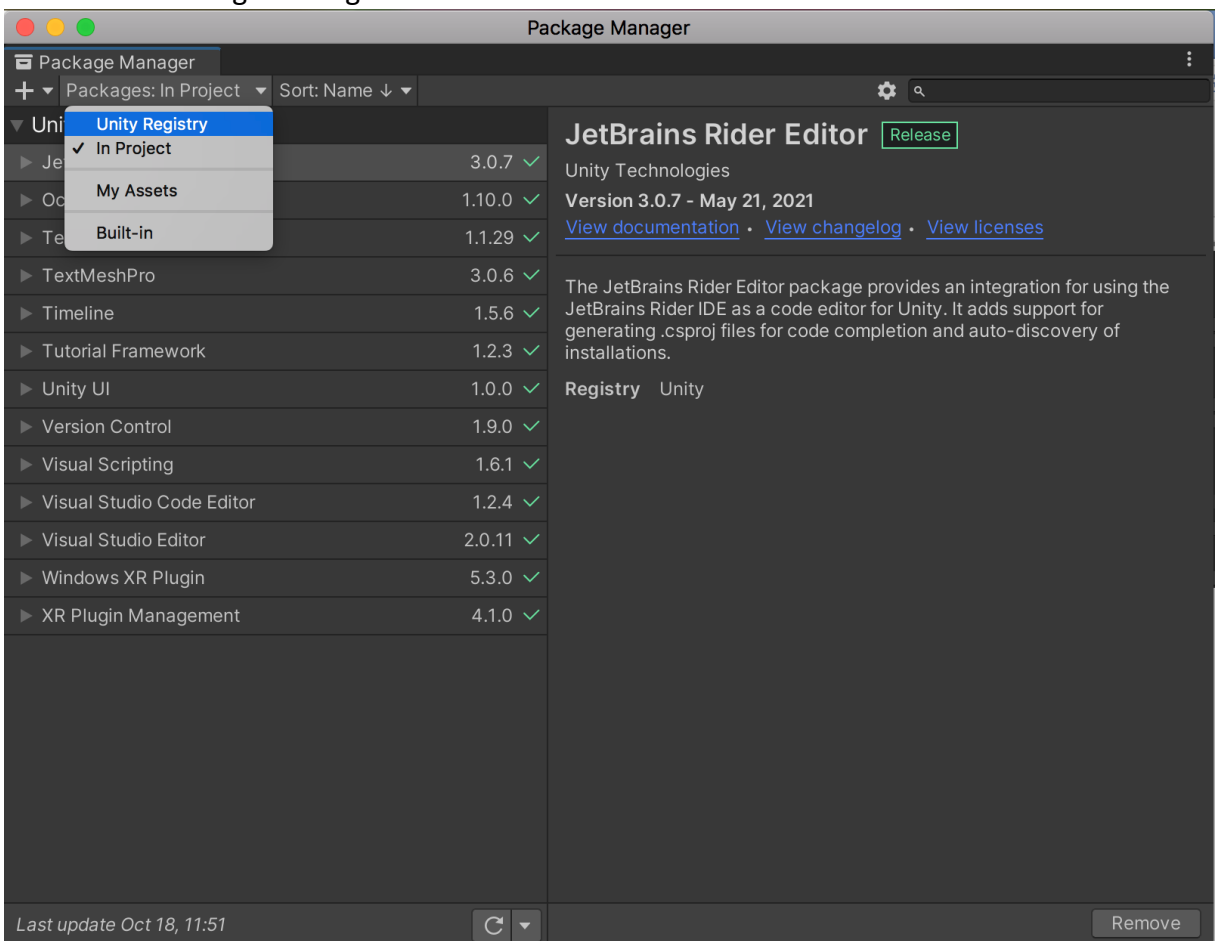
Edit → Project Settings → XR Plugin → for each Tab (PC Mac and Android Setting), choose Oculus

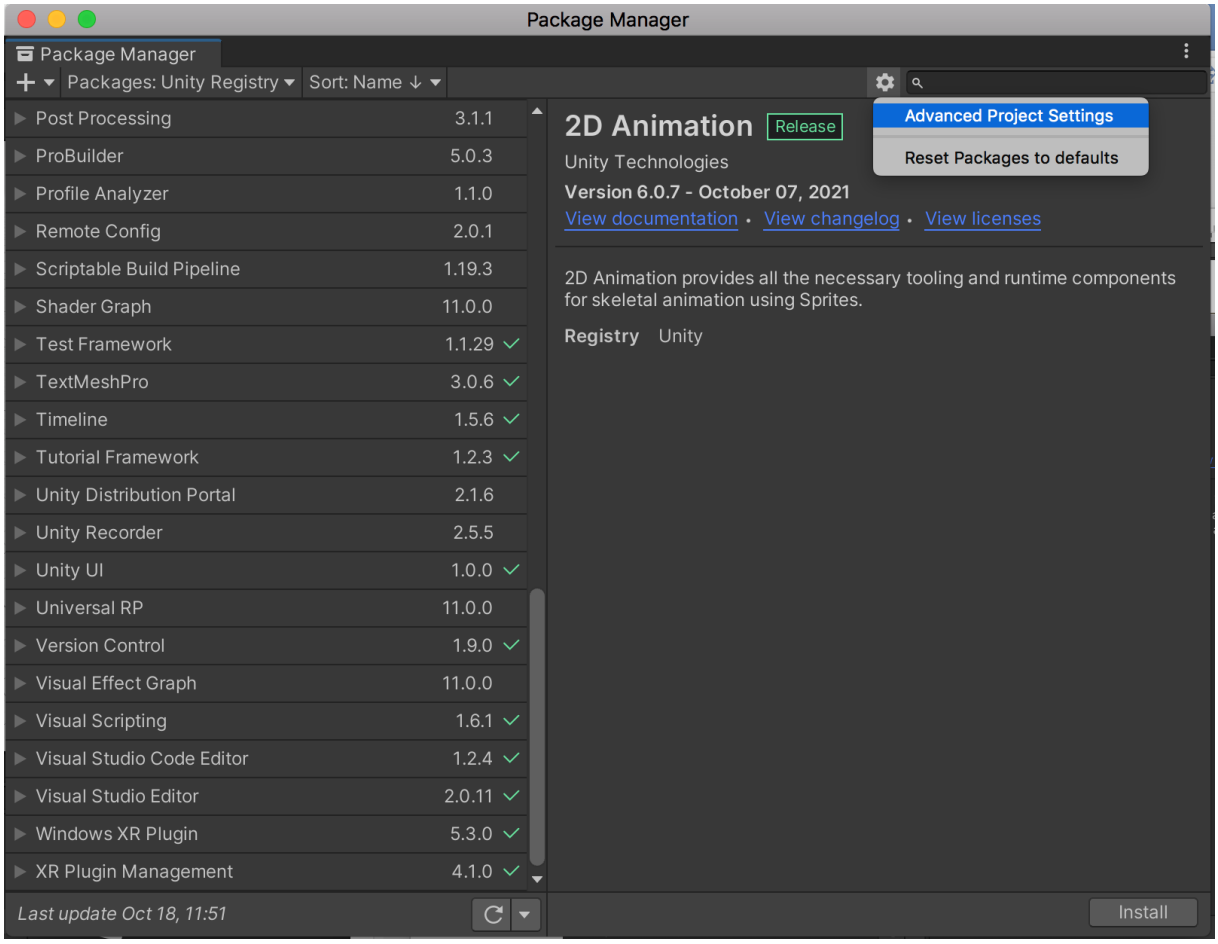


Test Sample by clicking: File --> Build settings → Android:

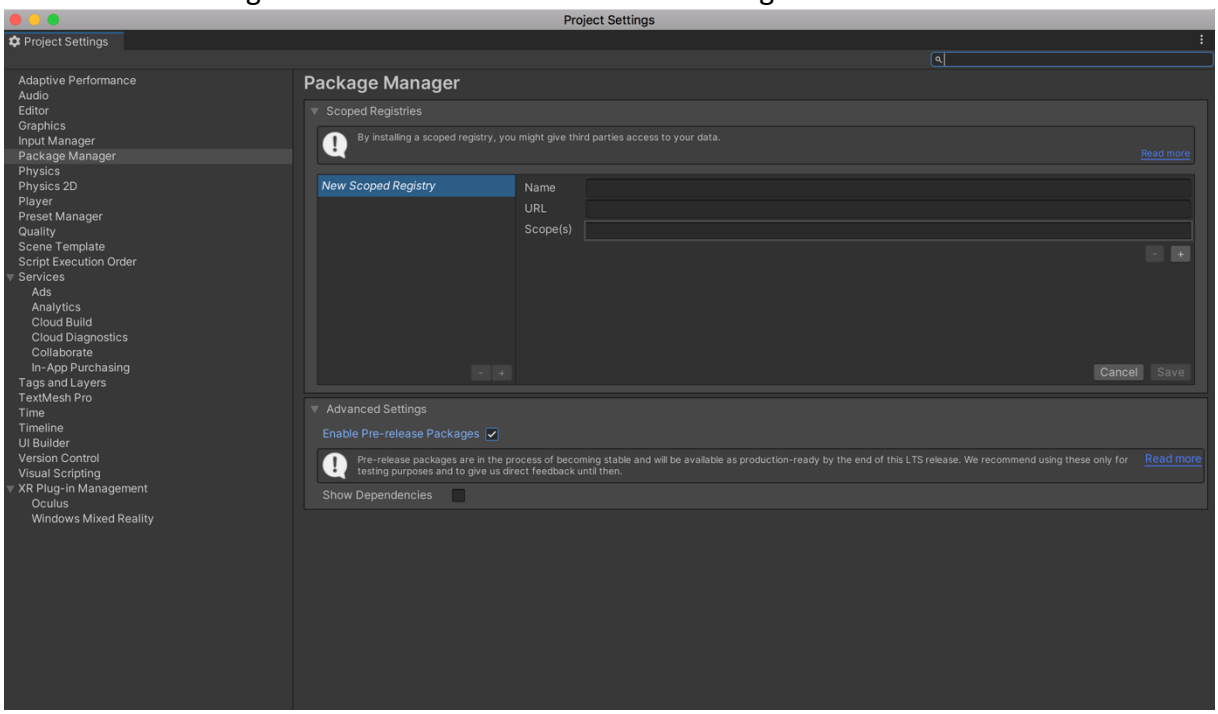


Window → Package Manager





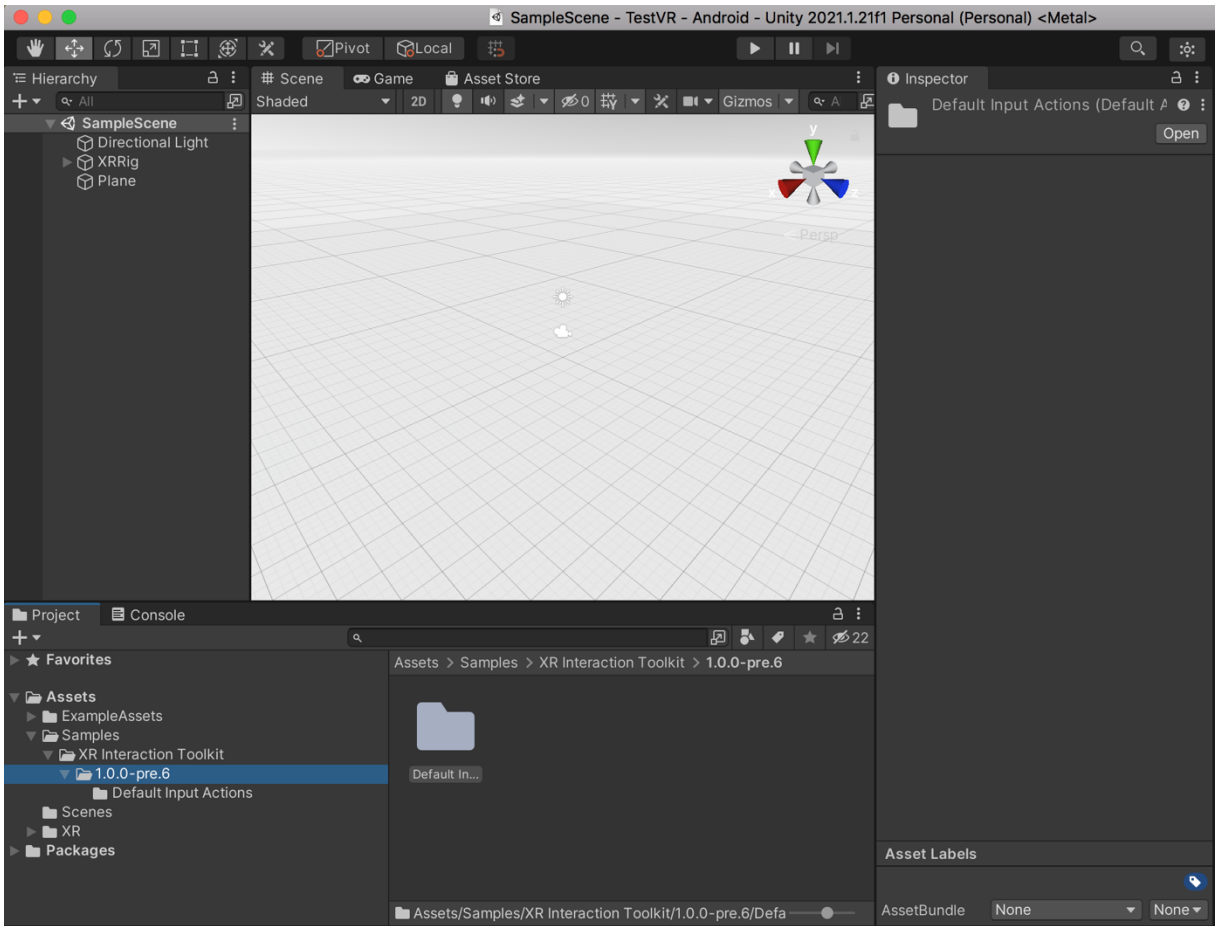
In Advanced Settings → check at Enable Pre-release Packages



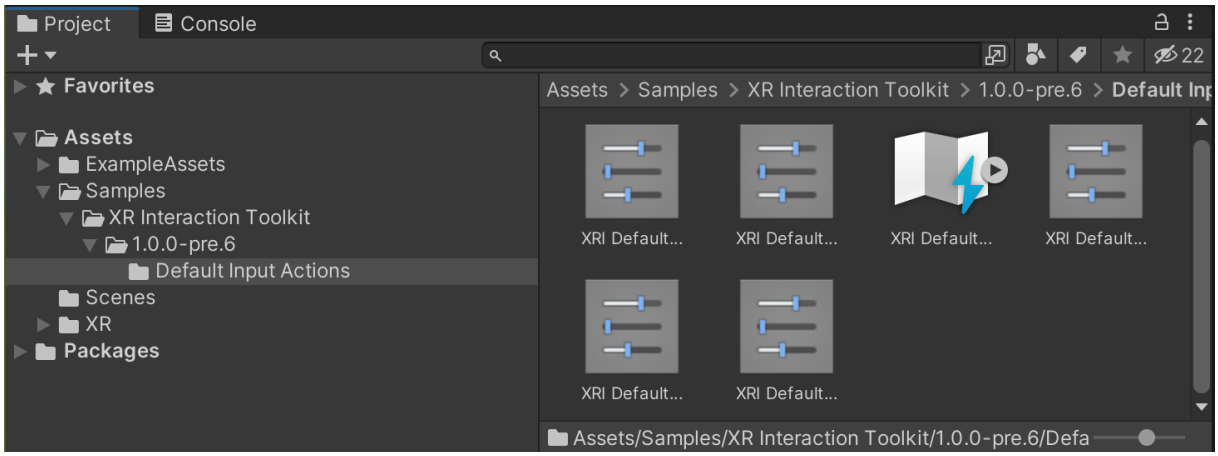
XR Interaction Toolkit → click on Install (on the right) → after that, Unity automatically restart

On this UI → Sample → Default Input Actions → Import

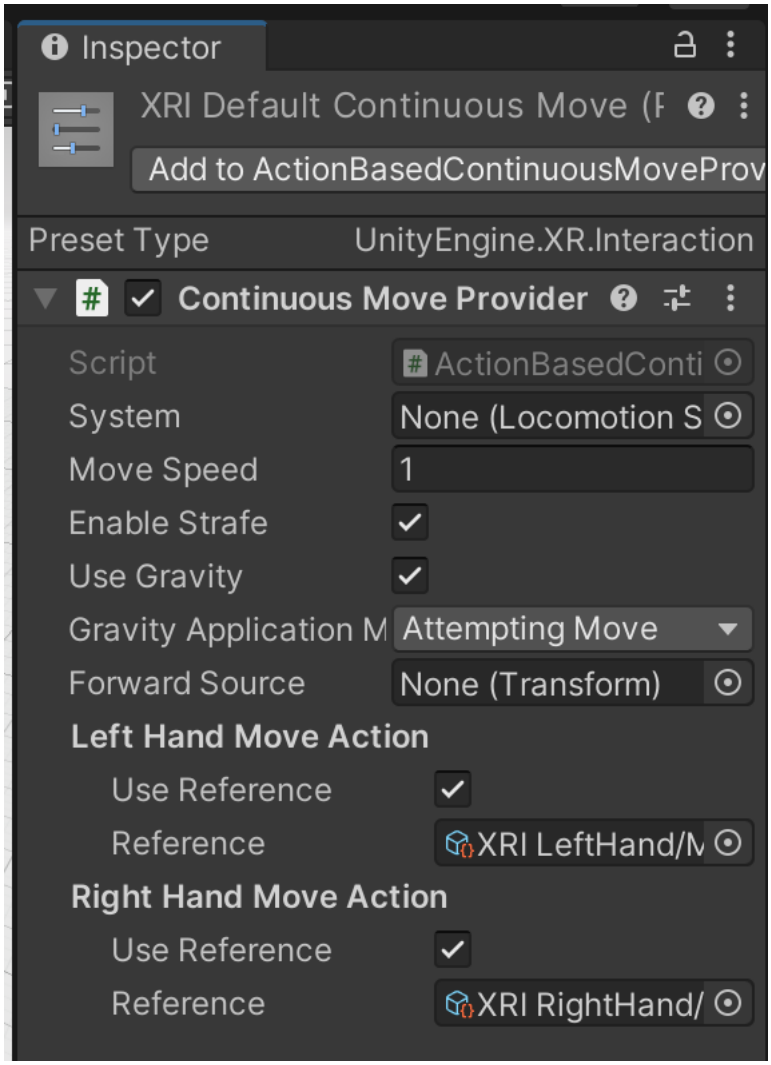
Go to Unity → Choose folder Default Input Action:



Open it:



For each file inside → Add to ActionBasedContinuosMove



Inspector
XRI Default Continuous Move (F
